Making a particular or multiple systems Active for script access

Purpose: To provide script access only for a particular or multiple system's by passing the system id's using the "enablesystem" option within the "guixt.sjs" file.

Pre-Requisites:

Make sure that the SAPGUI is closed on the desktop before following these steps.

Steps:

1. Locate the file "guixt.sjs" from the following path.

"C:\Program Files (x86)\SAP\FrontEnd\SAPgui"

2. Make the following entry to the file.

enablesystem = "SYSTEM ID"; – for single R/3 system.

Example: enablesystem = "TRT"; – means only TRT can access the scripts.

enablesystem ["SYSTEM ID", "SYSTEM ID"]; – for multiple R/3 systems.

Example: enablesystem ["TRT", "TTX"]; - means both these systems can access the scripts.

Sample guixt.sjs file:
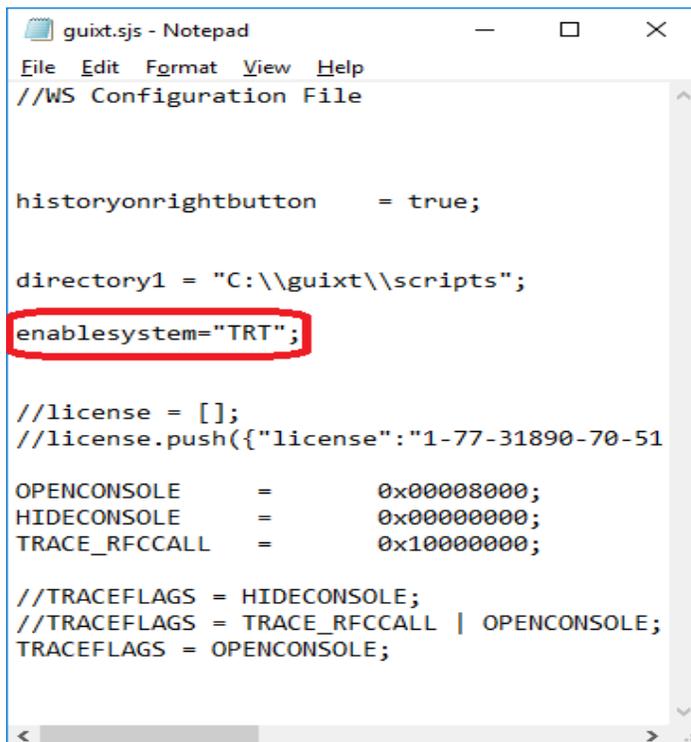

Before changes TRT vs TTX:
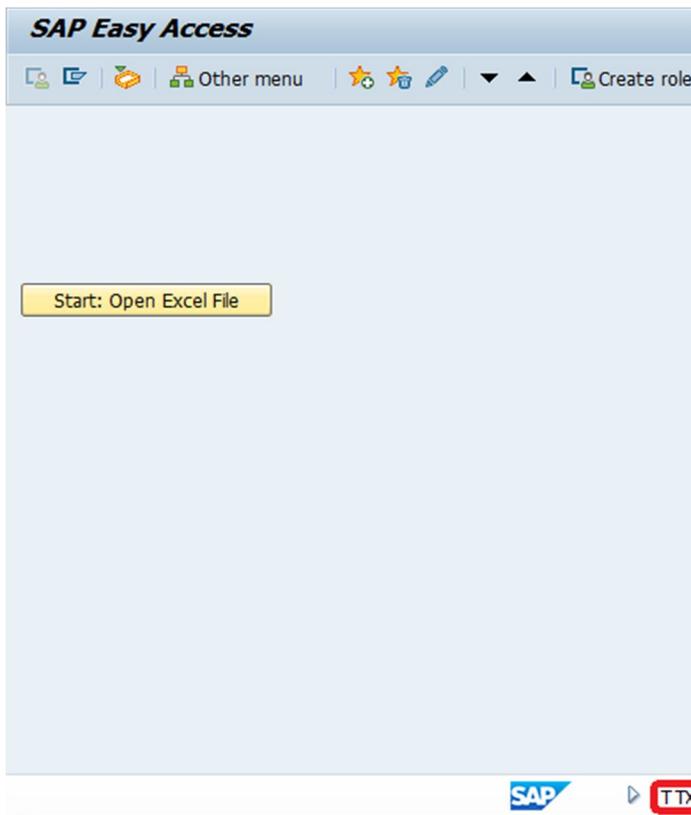

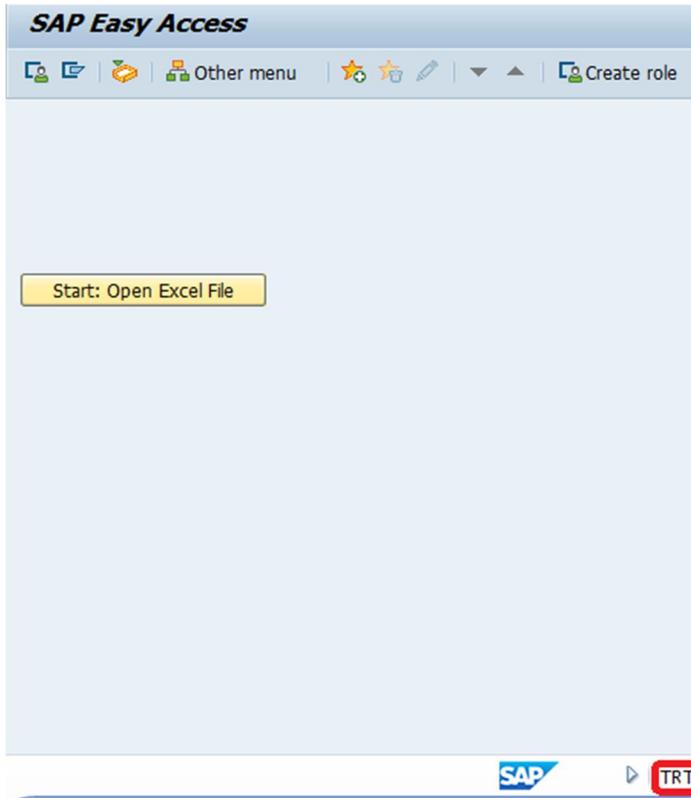

After Changes TRT vs TTX:
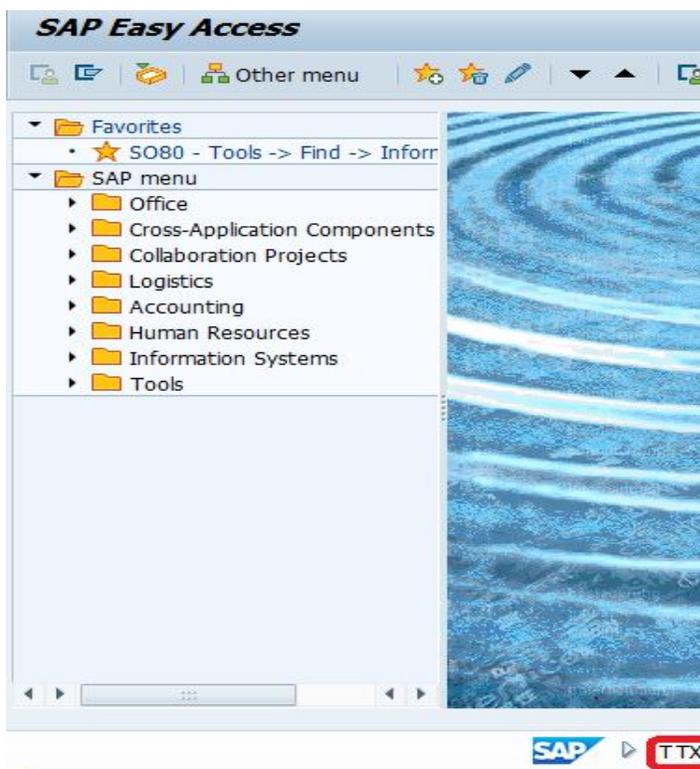

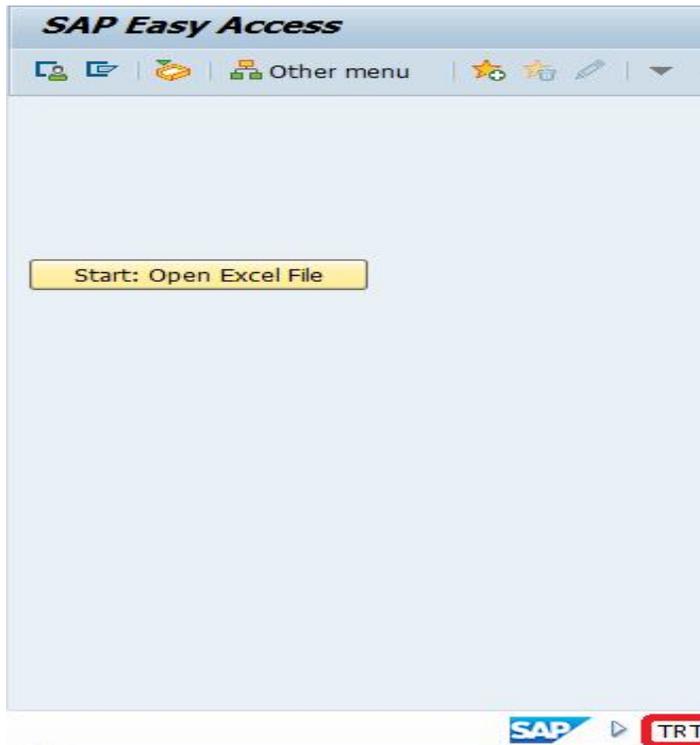

From the above figure only TRT has been provided access to the script where as TTX has been restricted for script access.
