

Using Inputfield options “uppercase” & “invisible”

Purpose:

The option “uppercase” makes the inputfield value appear in upper case which enhances the readability of the entry made.

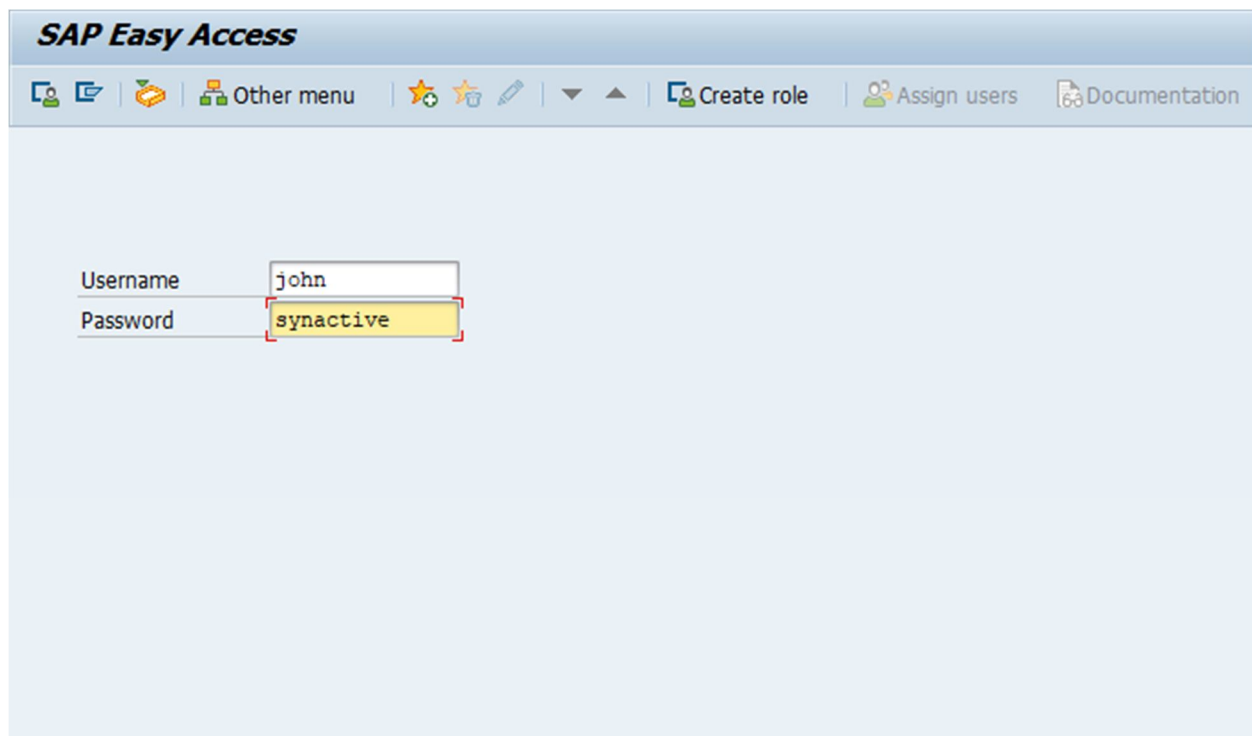

Whereas the option “invisible” hides the value entered in the inputfield with special character *. This option is useful in scenarios where user wants to create an inputfield like password or a secret pin to hide the entry.

Below code demonstrates the use of “uppercase” & “invisible”.

LiquidUI Code:

```
----- SAPLSMTR_NAVIGATION.E0100-----  
del("X[IMAGE_CONTAINER]");  
inputfield([3,5],"Username",[3,20],{"name":"inptfld_1","size":14,"uppercase":true  
});  
inputfield([4,5],"Password",[4,20],{"name":"inptfld_2","size":14,"invisible":true})  
;
```

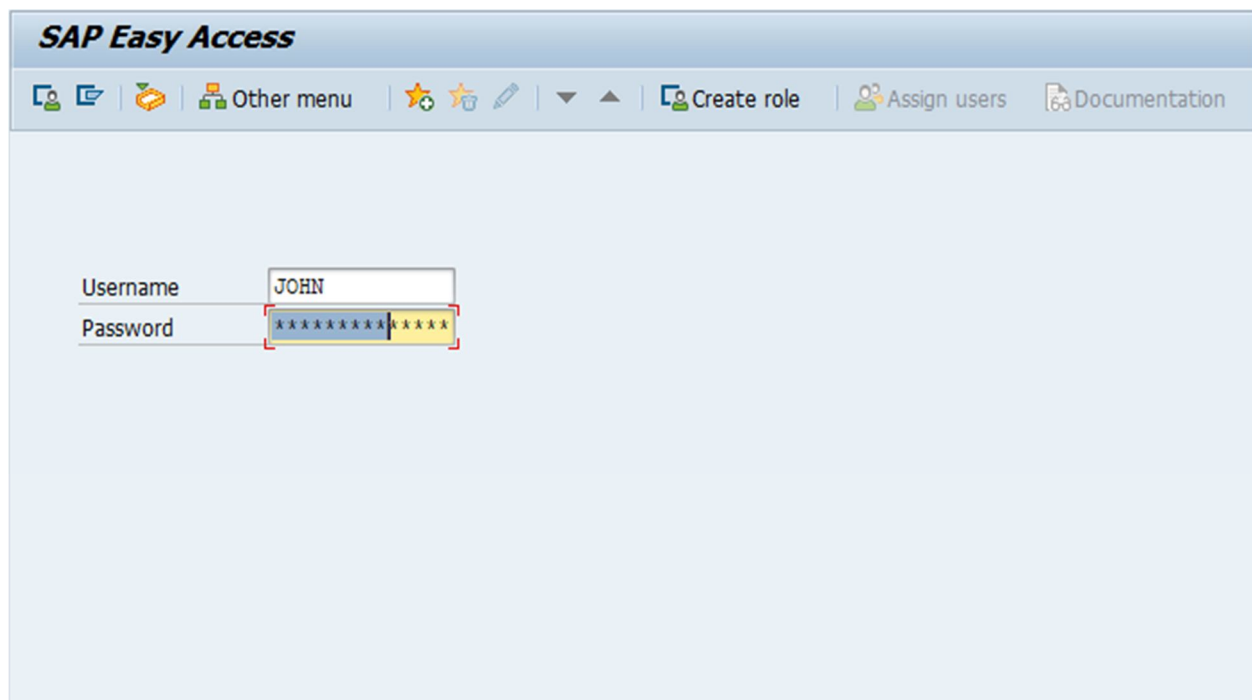

Before using options “uppercase” & “invisible”:

The screenshot shows the 'SAP Easy Access' user creation interface. The 'Username' field contains the text 'john' and the 'Password' field contains the text 'synactive'. Both fields are highlighted with a red border. The top navigation bar includes icons for user management and links to 'Create role', 'Assign users', and 'Documentation'.

Username	john
Password	synactive

After using options “uppercase” & “invisible”:

The screenshot shows the same 'SAP Easy Access' user creation interface, but with the 'uppercase' and 'invisible' options applied. The 'Username' field now contains 'JOHN' in all caps. The 'Password' field is masked with asterisks ('*****'). Both fields are highlighted with a red border. The top navigation bar remains the same.

Username	JOHN
Password	*****
