

## Demonstrating Signature feature using SFO on Liquid UI IOS

### Purpose:

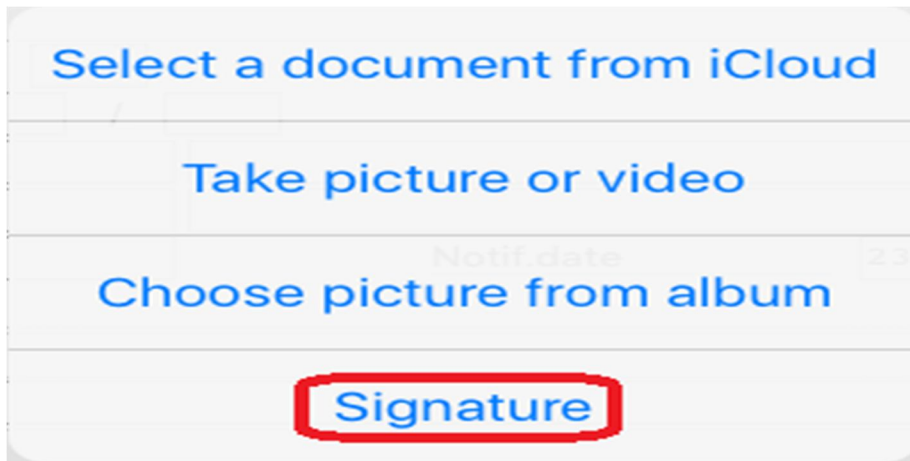

Signature is a new feature introduced on Liquid UI IOS to help the user further validate the report by uploading their signature in key business scenarios as proof of authentication.

### Example:

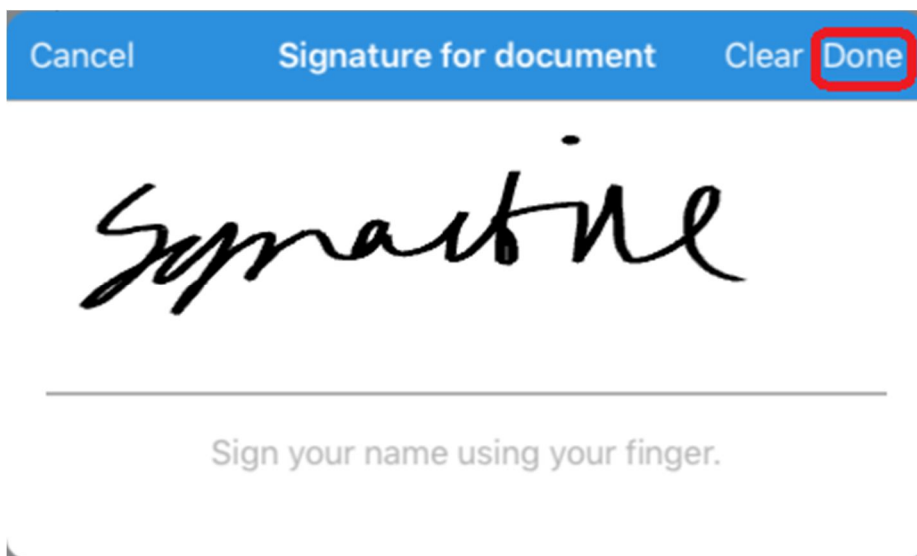

1. Navigate to any transaction which has SFO like IW24.
2. To the top right corner on the screen, one will see SFO - symbolically a paper clip, Hence Tap on it to select the option “Create Attachment”.

The screenshot displays the 'Create PM Notification: Malfunction report' screen in the Liquid UI IOS application. The top navigation bar includes a 'Back' button, a search bar with 'tcode', and a 'Save' button. A red box highlights the 'Create Attachment' option in the top right corner, which is represented by a paper clip icon. Below the navigation bar, there is a section for 'Notification' with fields for 'Notification' (10005574), 'Notific. Status' (OSNO), and 'Order'. The 'Reference object' tab is selected, showing fields for 'Functional loc.', 'Equipment', 'Assembly', and 'Ull'. The 'Responsibilities' section includes fields for 'Planner group', 'Main WorkCtr', 'Person Responsi', and 'Person Responsi'. The 'Attachment list...' section is visible below the 'Create Attachment' option.

3. select the option “signature” from the pop-up list.

4. Draw the signature within the empty area and click on “Done”.

5. A notification will be successfully generated.
