

Determining the UDID for iOS using iTunes

It is quite easy to get the UDID of your iOS device.

The description for the app notes says that Apple has removed the ability for apps to access UDID under iOS 7. So, retrieving UDIDs through an external app probably isn't going to work.

Steps to follow in obtaining UDID for the iOS Device

1. Connect iOS device to iTunes and on “*Summary*” screen the “*Serial Number*” is visible.

2. Click on the “*Serial Number*” and then “Identifier (UDID)” of the iOS device is shown.

3. Note down the 40 character UDID which doesn't start with FFFFFFFF
