

Using SFO on Liquid UI Android/IOS

Purpose:

As in SAPGUI, Liquid UI Android/IOS also provides the user the ability to create an attachment, view the attachment list and store business document using the option Services for Object (SFO).

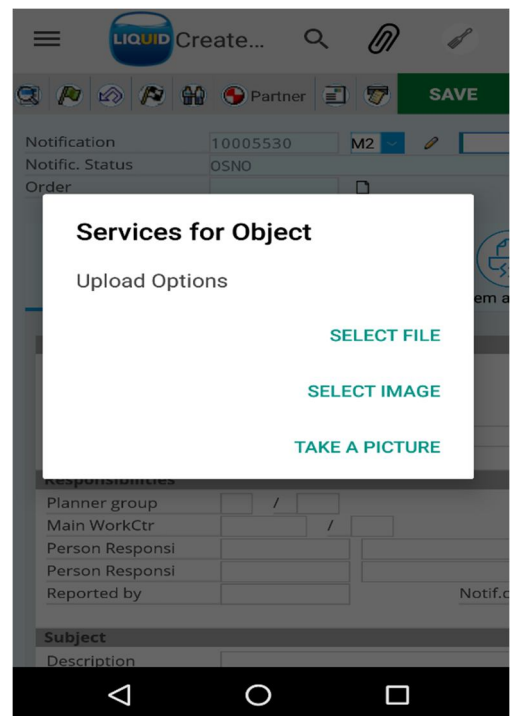

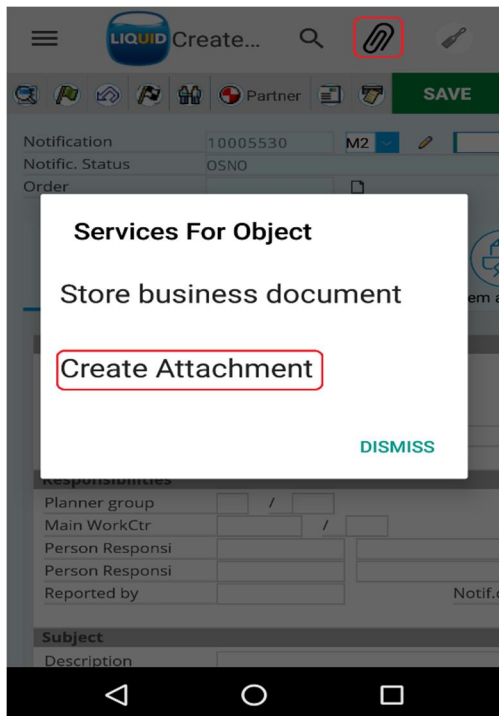

Usage Scenario(s):

End-user wants to report malfunction with an equipment, by uploading a file, picture or a video using the device's built-in camera. so that the technician can be notified with relevant data.

Example:

1. Navigate to any transaction which has SFO like IW24.
2. To the top right corner on the screen, one will see SFO - symbolically a paper clip.
3. Tap on it to use any of the options as per the requirement.
