

Session management with LiquidUI Android

Purpose:

As in SAPGUI, LiquidUI Android allows the user to open and manage multiple sessions effectively.

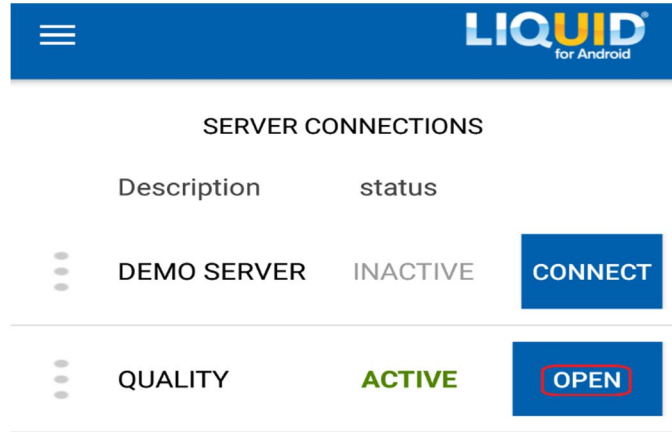

Usage:

1. Navigate to the connection list screen and click on the button – “connect”, for a particular server you wish to login.
2. Once Logged IN, select the settings menu  to the top left corner.
3. You will see the number of sessions that are currently opened.

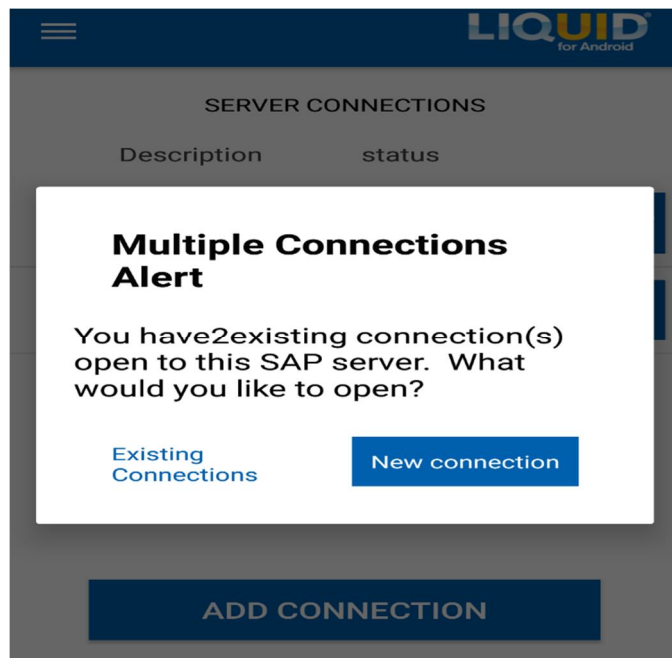

Click on “Close Current” or “Close Session” to close the active session highlighted with radio button and navigate to “Server Connections” screen or else click “Home Screen” to directly navigate to “Server Connections” screen to see the total number of sessions active.

4. Click on “Open” to start managing multiple sessions.
