

## Setting Text Color on Liquid UI Android

### Purpose:

Liquid UI Android provides the user the choice to set the Text Color of the screen area.

### Steps:

1. Start Liquid UI Android and on the connection list screen, single tap the settings icon to the left top corner – symbolically three horizontal lines.

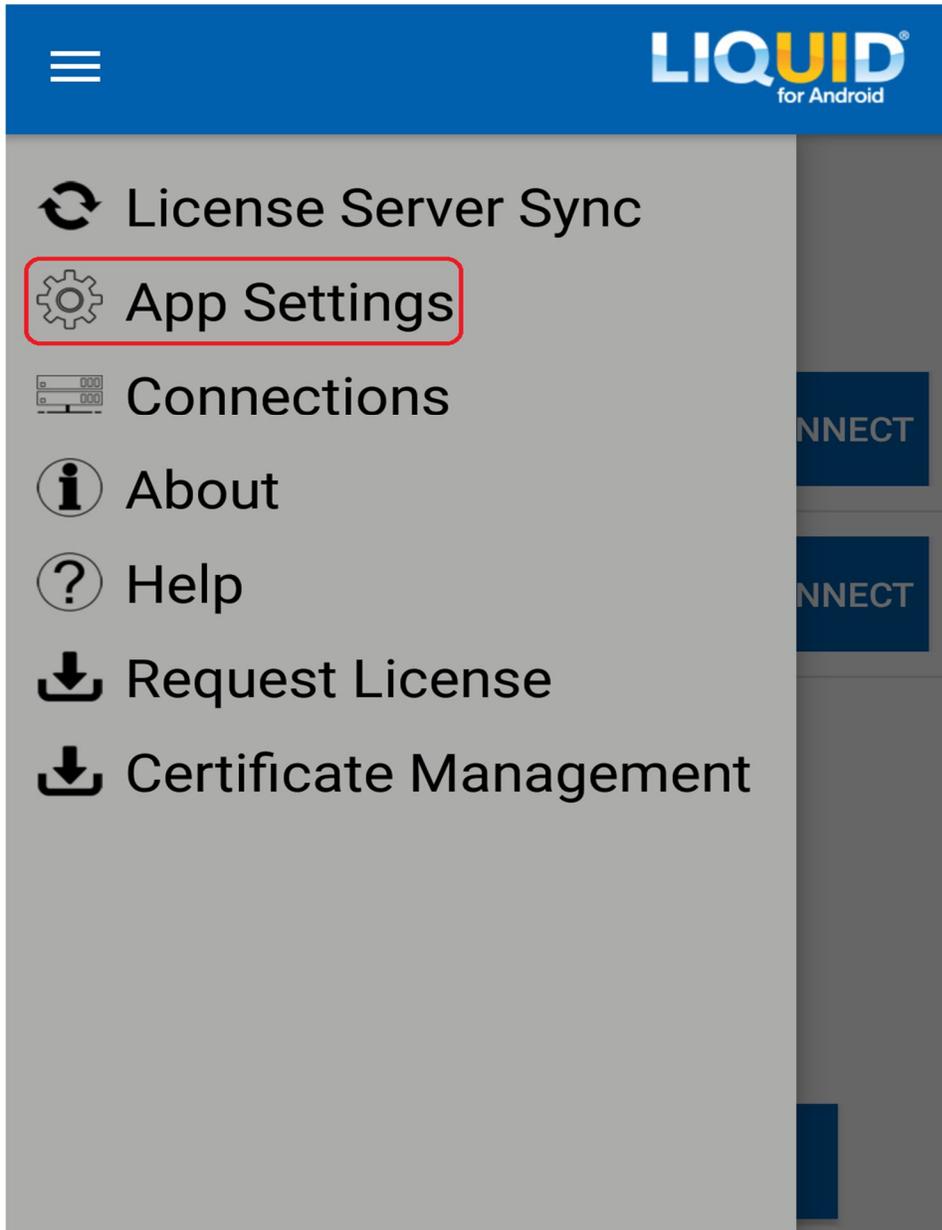

#### SERVER CONNECTIONS

	Description	status	
☰	DEMO SERVER	INACTIVE	CONNECT
☰	june	INACTIVE	CONNECT

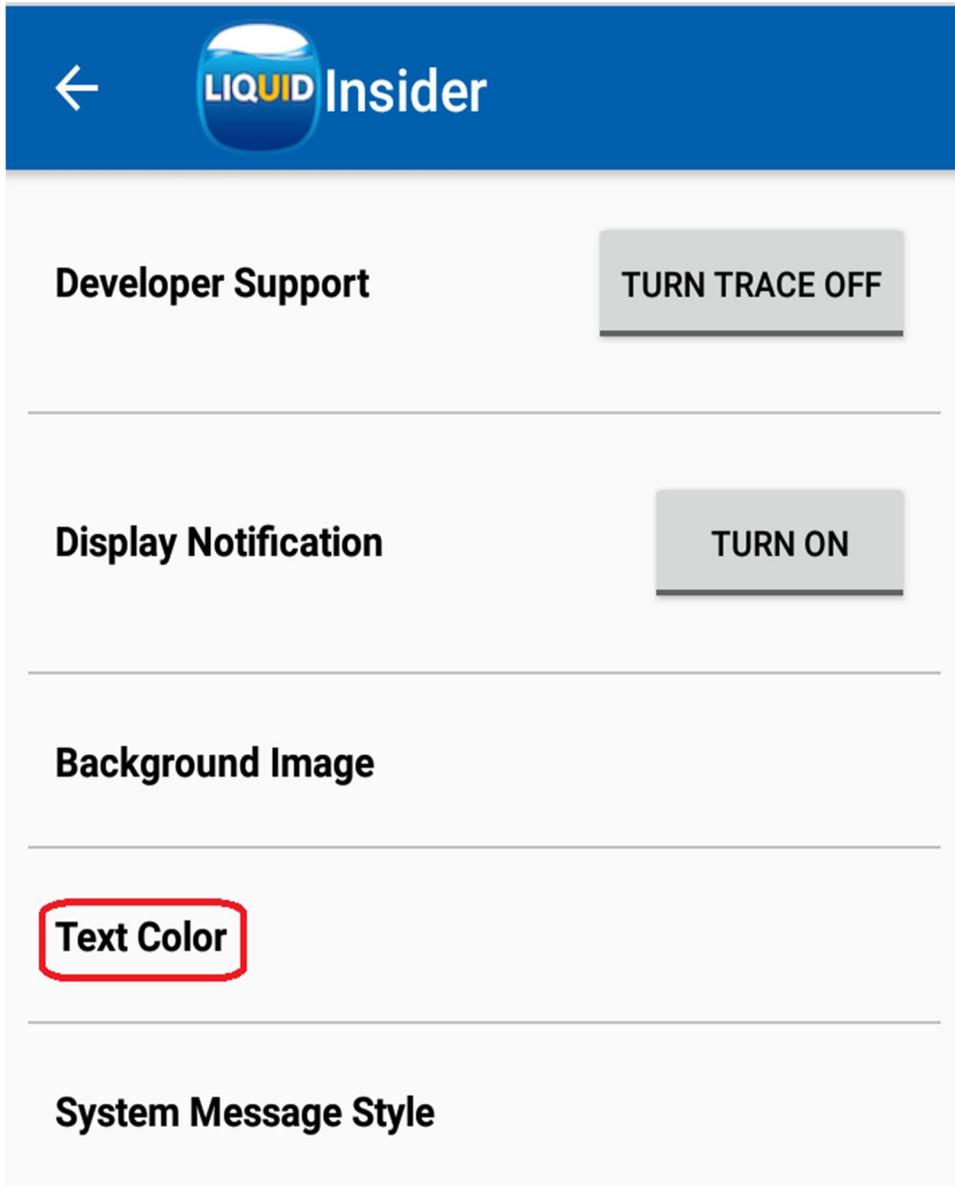

**ADD CONNECTION**

---

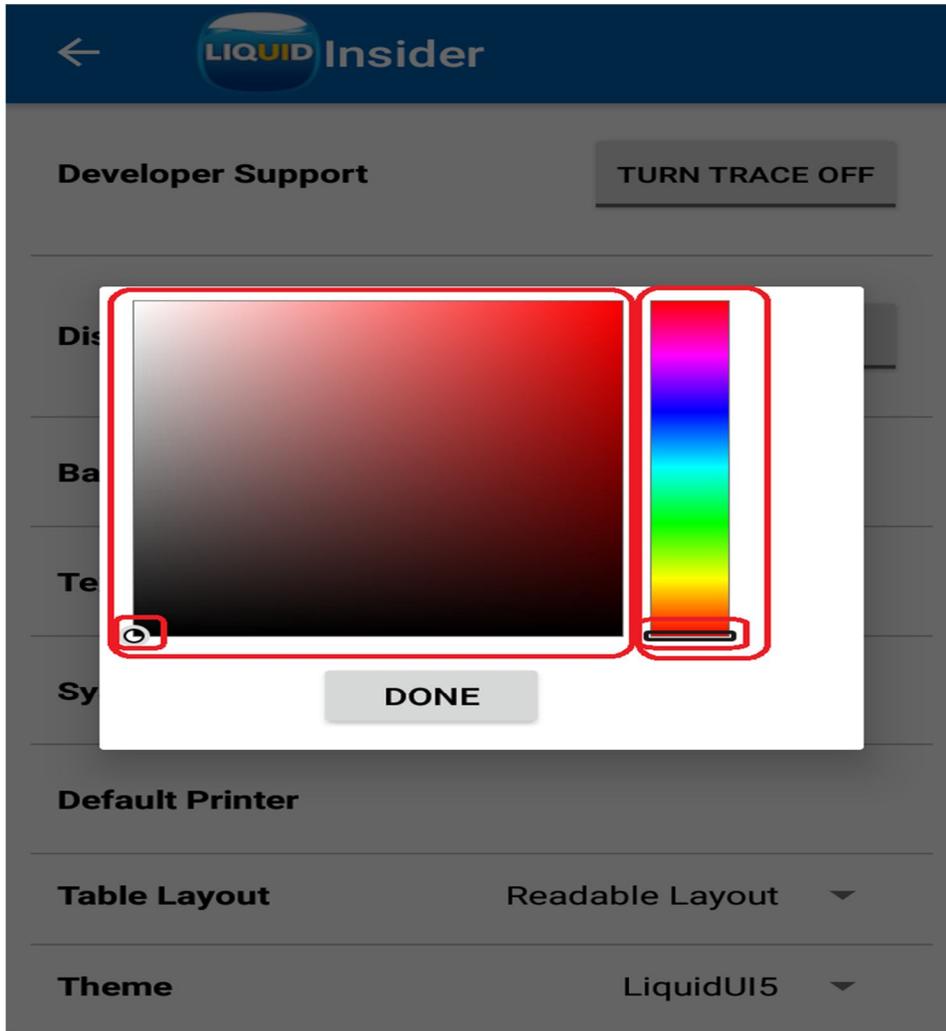

2. Select the option “App Settings”.

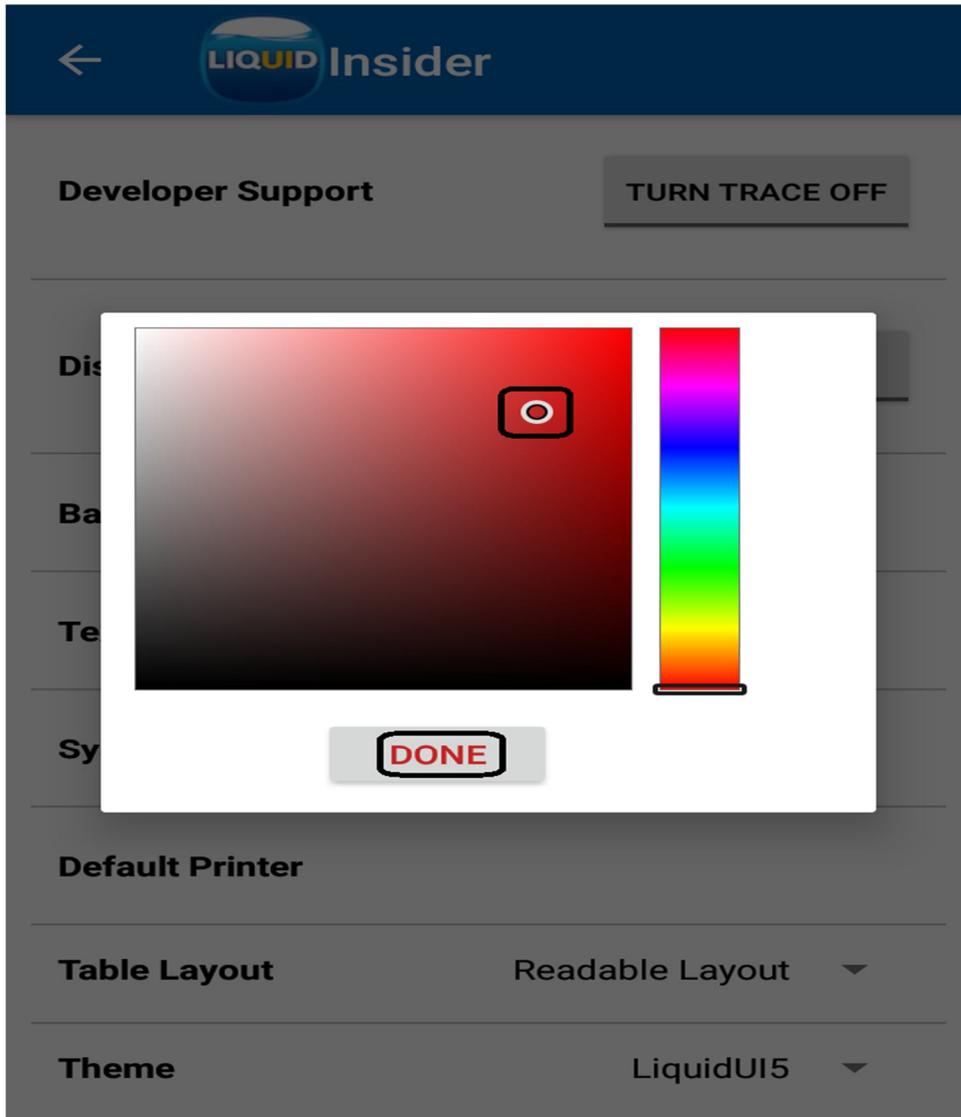

3. Scroll down the Insider to select the option “Text Color”.

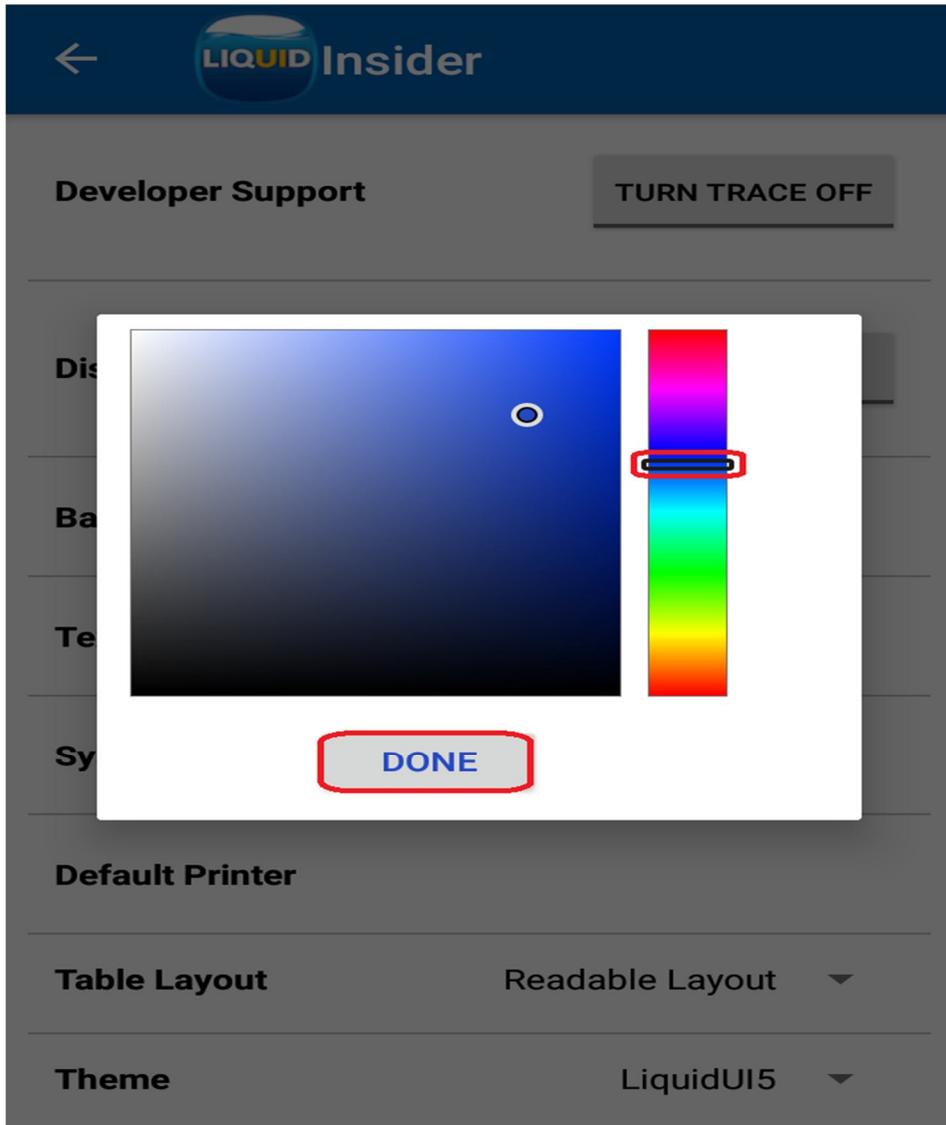

4. You will get a popup on which there are two areas to select the color from. i.e., a square area with a circular bar for selection and a rectangular area with a rectangular bar as highlighted below.

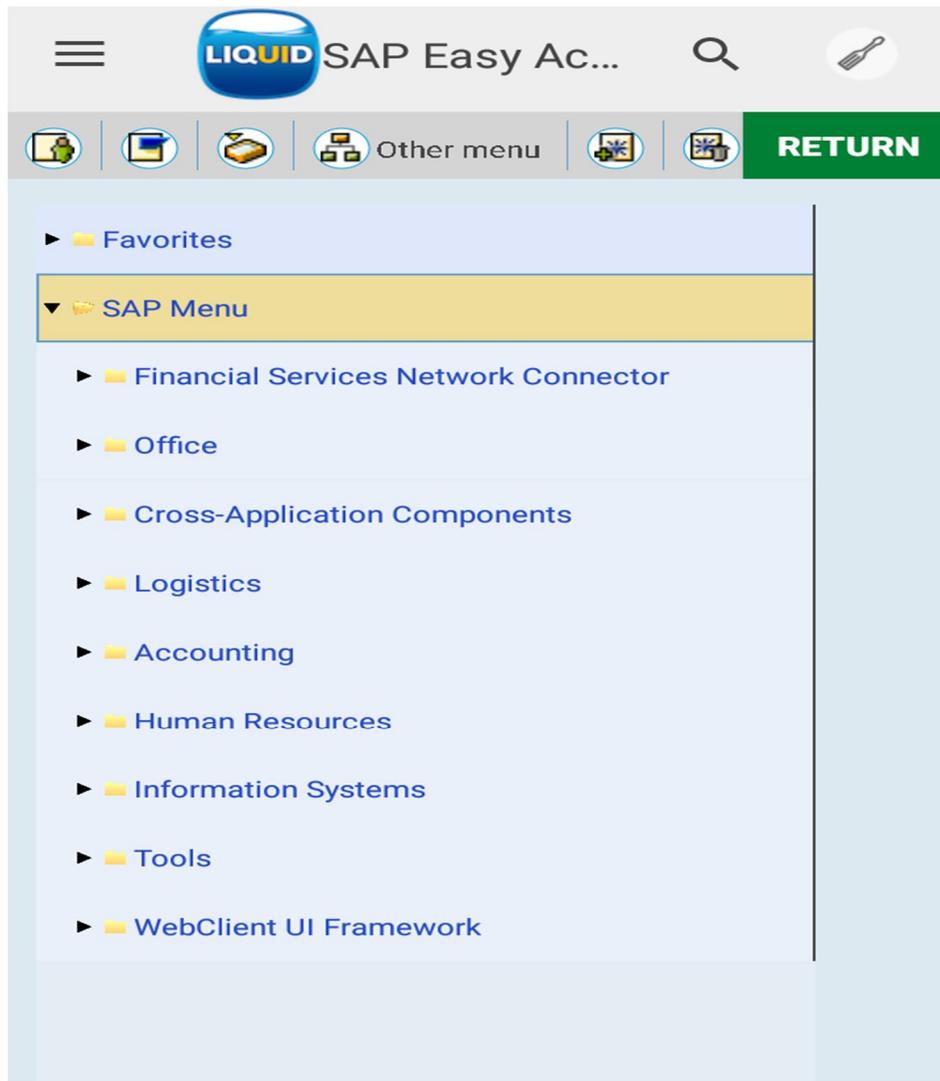

5. Move the circular bar to any position on the square area so that the button “DONE” changes the text color on it, indicating selection of color.

6. However, to utilize further available colors from the rectangular area, move the rectangular bar to any position based on your choice of color and click “DONE”.

7. Navigate to the connection list to login to the server to see the changes take effect as shown below.

8. To take-off the Text Color back to its original, follow steps 1-3 and click on “DONE” as shown below.
