

Auto Logon on SAPGUI using ELOGON Script File

Purpose:

Auto logon to SAP server using "ELOGON.sjs" file.

Usage:

User will be navigated to Easy Access screen as soon as clicked on server connection on "SAP LOGON" pad, eliminating the manual entry of username and password.

Liquid UI Code

```
/////////////////ELOGON.sjs////////////////////////////////////
```

```
set("F[User]","username"); // sap user name
```

```
set("F[Password]","password"); // sap password
```

```
enter();
```

Password can be encrypted and decrypted then assigned to variable which in turn can be passed to "Password" inputfield with a simple WS function using "RC4 Encryption Algorithm".

Please see below link for more information on encrypting and decrypting the password..
