

Variations of Tip Command

Purpose:

Tip command can be used to add tips to various SAP native screen elements like Inputfield, Pushbutton, Groupbox, Checkbox, Radiobutton.

This allows developer to further add information related to the screen element in the form of tooltip which in turn helps the end user to understand the functionality of that screen element.

Syntax:

```
tip("screen element code[screen element name]","adding tip");
```

Example:

```
Pushbutton: tip("P[Class selection]","select the appropriate class");
```

Liquid UI Code:

Below code demonstrates the variations of tip command on QM50 transaction.

```
----- RQMAAG10.E1000-----
```

```
tip("F[Sel. prof.]", "List of profiles to select from"); //Inputfield
```

```
tip("G[Notif. selection]", "To selection notifications"); //Groupbox
```

```
tip("P[Class selection]", "select the appropriate class"); //Pushbutton
```

```
tip("C[Notifications]", "Evaluating notifications"); //Checkbox
```

```
tip("R[Day]", "Summarizing notifications based on creation day"); //Radiobutton
```
