

Liquid UI: Function Module Call

This is an example of calling a Function Module using WS. In this example, we will use the Function Module **BAPI_USER_GET_DETAIL** display information on a screen.

User Interface

Log into SAP and the FM call will run automatically. It will display information about the user's defaults and what type of user authorization it is (e.g. "Super").

The data we are pulling from in **BAPI_USER_GET_DETAIL** comes from the **LOGONDATA** output and the **PARAMETERS** table.

NOTE: When using the call command, be sure to have the correct RFC parameters in your guixt.sjs configuration file.

```
//////////  
// RFC PARAMETERS -- Default for Internal  
/////////  
rfcuser = "username";  
rfcpassword = "password";  
rfcconnect = ["IFDATABASE=TRX, CLIENT=800, ASHOST=JUNEAU, SYSNR=00"];
```
