

Start Option

Purpose:

- **Start** Option is used to launch a website or an Application when an image is clicked.
- With the help of start option we can also run (.bat and .exe Files).

The Possible Syntaxes is as Follows:

For Launching Website:

```
{"Start":"https://www.guixt.com/"};
```

For Launching an Application :

```
{"Start":"C://Directory_Name//Filename"};
```

Example I :

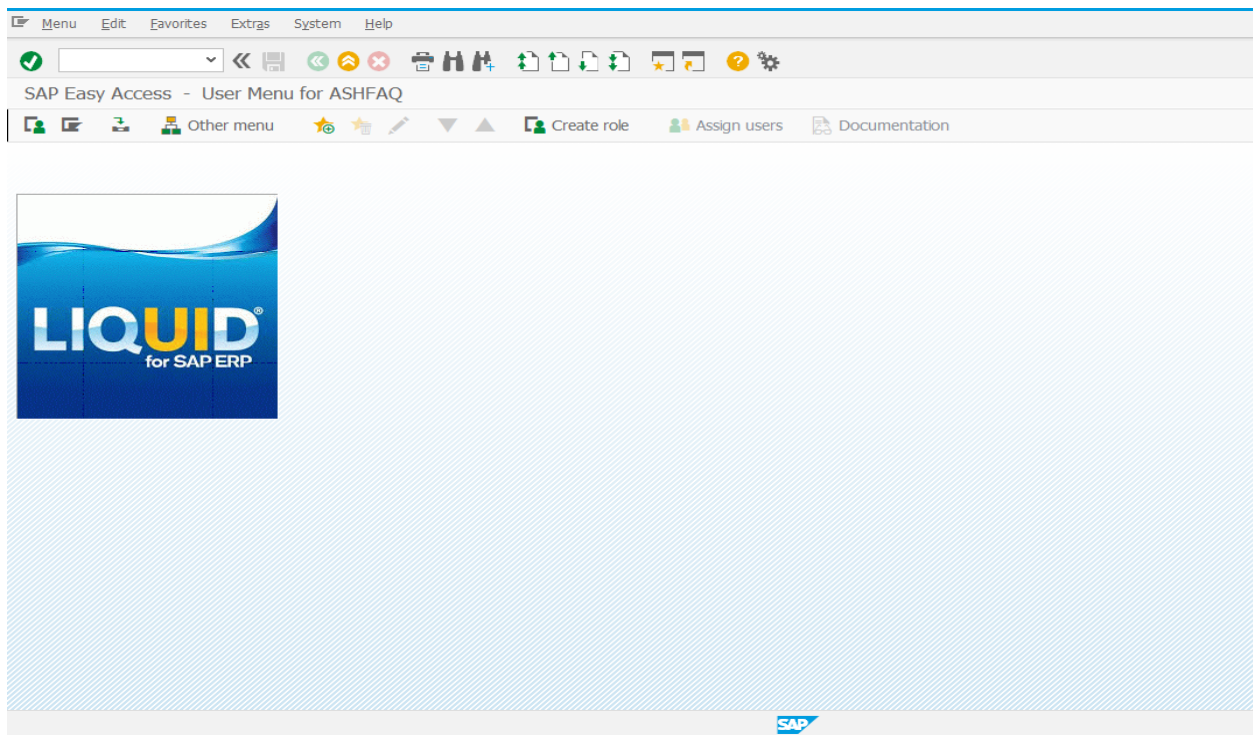

The Following are the Steps that Illustrates the use of start option to Launch a website.

1. **Open** the SAP Easy Access Script file "SAPLSMTR_NAVIGATION.E0100.sjs" which can be found in the directory folder as Configured in the "guixt.sjs" file.
2. Add the following **code snippet** to the file

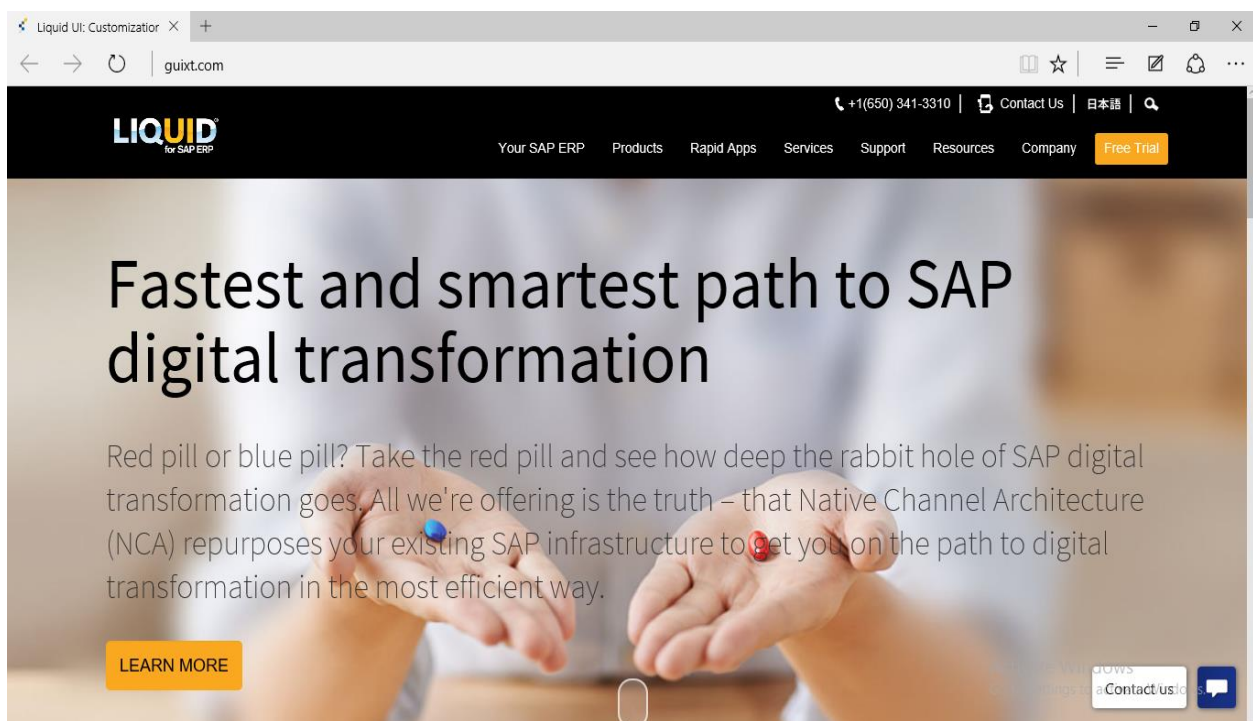

```
image( [1,12], "C:\\LiquidUI\\scripts\\Image.png",{"start":"https://www.guixt.com/"});
```

3. Save the file and Refresh the SAP Screen.

Click on the Image.

A new window will pop-up that launch the Website.

Example II :

Following are the Steps that Illustrate the use of Start option to Launch an Application.

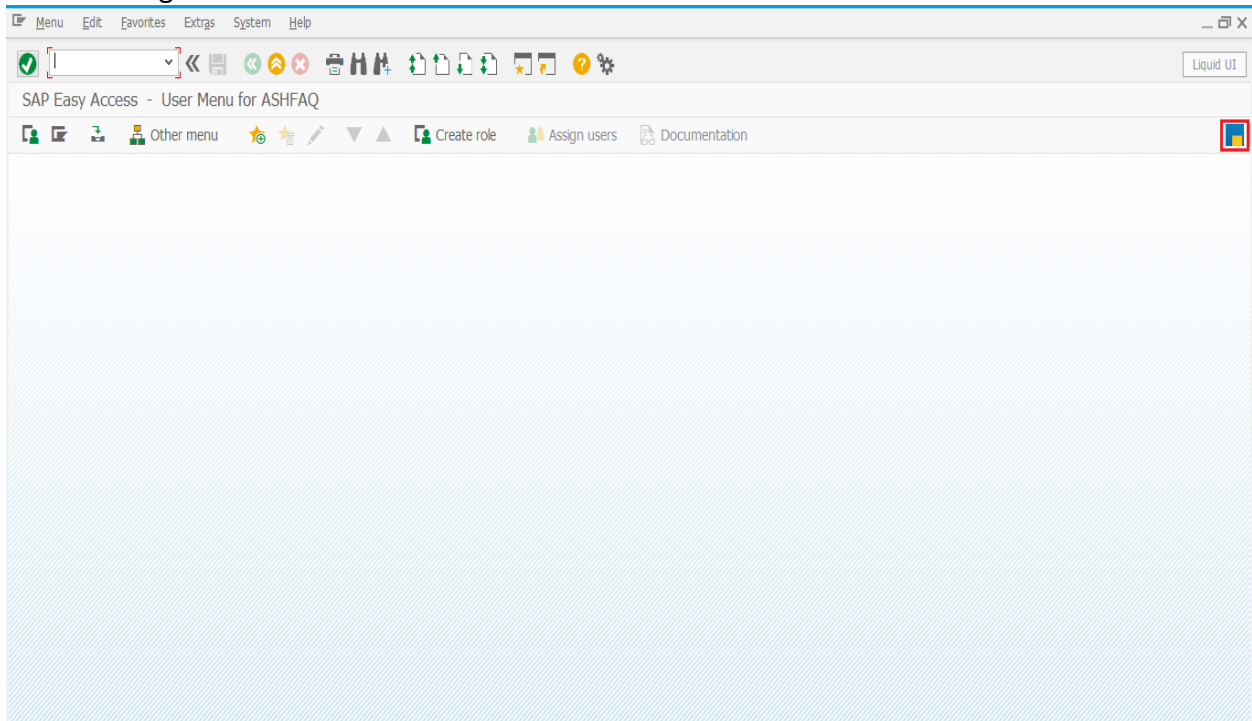

1. **Open** the SAP Easy Access Script file “SAPLSMTR_NAVIGATION.E0100.sjs” which can be found in the directory folder as Configured in the “**guixt.sjs**” file.
2. Add the following **code snippet** to the file

```
image("[TOOLBAR]", "C:\\LiquidUI\\scripts\\Designer.png", {"start": "C:\\LiquidUI\\scripts\\Designer.exe"});
```

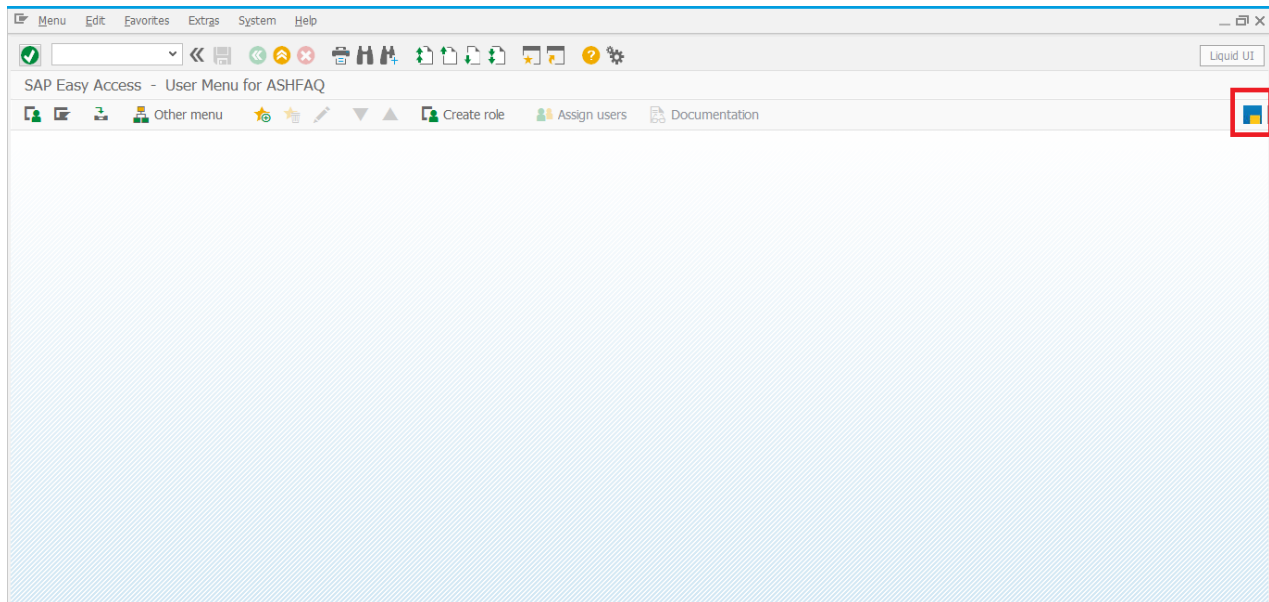

NOTE:

Put the “Application file” into the directory that is specified in the above code.

3. The Image is Visible on the TOOLBAR as Shown.

Click on the Image which is on the top right corner of the SAP Screen as Shown.

It will Launch the Application.
