

Reading Data from File to Textbox

Purpose:

To read data from text file into a textbox on SAPGUI.

Liquid UI Code:

```
//////////////////// SAPLSMTR_NAVIGATION.E0100.sjs //////////////////////
```

```
del("X[IMAGE_CONTAINER]"); // deletes image
```

```
textbox([2,1], [8,117], { "name":"z_textbox", "textfont":"Arial", "textheight":"12",  
"textweight":"5"}); // textbox
```

```
pushbutton([TOOLBAR],'Copy from File','?',{process:z_readfile}); // triggers function on click
```

```
function z_readfile(){
```

```
// filename specifies the file in use
```

```
openfile('filename'); // command opens specified file
```

```
NEXT_LINE_READ:
```

```
readfile('filename',{z_content:true}); // read file data into variable
```

```
if(isBlank(z_content)){ // condition to exit loop
```

```
println("<<<<<<<<<<<<<<<GOING END>>>>>>>>>>>>>>>");
```

```
goto END;
```

```
}
```

```
copytext({"fromstring":"z_content","totext":"z_textbox", "appendline":true}); //copy data from  
variable to textbox
```

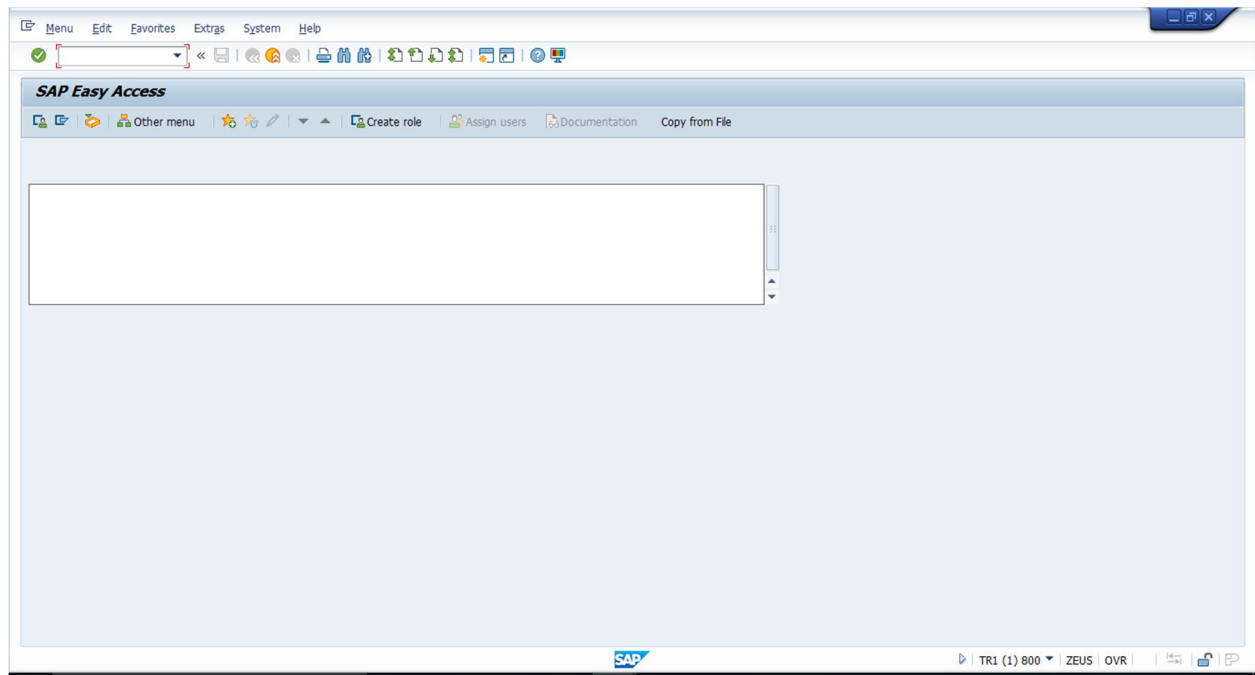

```
goto NEXT_LINE_READ;
```

```
END:
```

```
closefile('filename'); //close opened file  
}
```

Note: file with data to be read should be available in the specified path.

Click on “Copy from File” button

Data from File Copied to Textbox
