

## LiquidUI – tablewidth Command

### **Purpose:**

With `tablewidth()`, you can change the width of a table control in SAP. This command can be used only with native SAP tables.

### **Syntax:**

```
tablewidth("T[Tablename]",X);
```

### **Properties:**

**Tablename** – name of a SAP table.

**X** - specified new width for SAP table

**Note:** "X" is replaced by the numerical value which specifies the new width for the table. The width specifies the number of characters.

Below example demonstrates the `tablewidth` command on "All items" table of "VA01" transaction.

Navigate to second screen of "VA01" transaction where we have "All items" table and below enter below code in script file of this screen.

### **Liquid UI Code:**

```
//////////////////////// SAPMV45A.E4001.sjs //////////////////////////
```

```
tablewidth("T[All items]", 50);
```

## Screen before using tablewidth()

SAP Sales document overview screen. The 'All items' table is wide and contains multiple columns.

Item	Material	Order Quantity	Un	Description	S	Customer Material Numb	ItCa	DGIP	HL	Item	D	First date	Pint	Batch	CnTy	Amou
											D	04.01.2018				
											D	04.01.2018				

## After adding tablewidth()

SAP Sales document overview screen. The 'All items' table is narrower, with some columns truncated.

Item	Material	Order Quantity	Un	Des
