

Liquid UI – removefile command

Purpose:

The removefile command is used to delete files.

When a file is no longer needed, use the removefile command to delete the file. It is necessary to use the full path of the file.

Syntax:

```
removefile("filename");
```

Example:

In below example, we will use removefile command to delete a sample file using WS function. The code would be as follows:

LiquidUI Code:

```
//////////////////////// SAPLSMTR_NAVIGATION.E0100.sjs //////////////////////////
```

```
pushbutton([TOOLBAR],'Remove File','?',{process:'z_removefile});
```

```
function z_removefile(){  
    removefile("file1.txt ");  
}
```

The "file1.txt" is now deleted.
