

## Selecting Liquid UI Table rows and columns

### Purpose:

Selecting rows and columns in a Liquid UI table.

To select particular row in a table you can use the following syntax.

```
table_name.selectedrows[row_index] = "X";
```

To select particular column in a table you can use the following syntax.

```
table_name.selectedcols[col_index] = "X";
```

table\_name - name of the liquid ui table.

row\_index – row number you want to select.

col\_index – column number you want to select.

Liquid UI Code:

```
//////////////////// SAPLSMTR_NAVIGATION.E0100.sjs //////////////////////
```

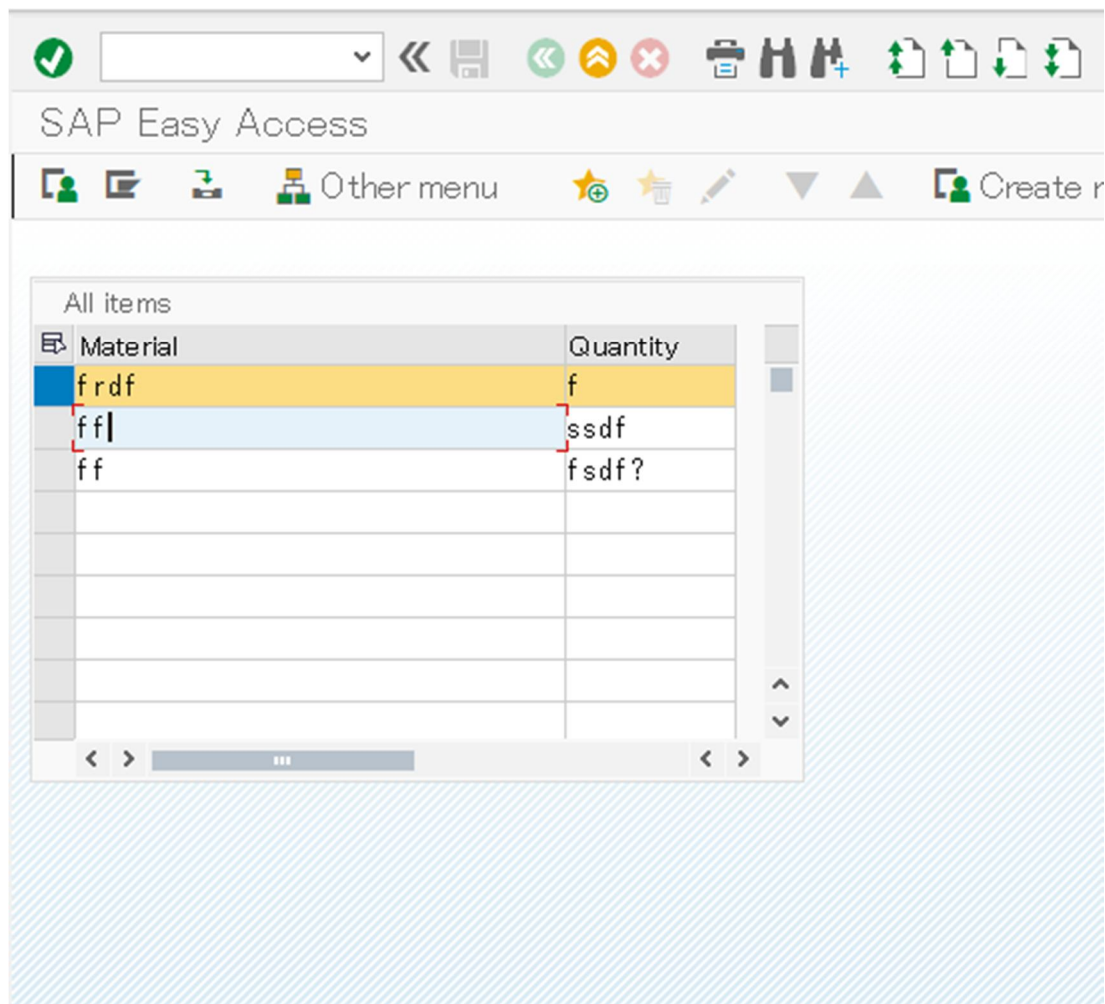

```
del("X[IMAGE_CONTAINER]");
```

```
table([1,1], [12,48], {"name":"proj", "title":"All items",  
"rows":10,"rowselection":true,"columnselection":true});
```

```
column('Material', {"table":"T[All items]", "size":30, "name":"matnr", "position":1, "table":"T[All  
items]"});
```

```
column('Quantity', {"table":"T[All items]", "size":10, "name":"qty", "position":2, "table":"T[All  
items]"});
```

```
// for selecting a row of a table
```

### Selecting particular column of a liquid UI table with index provided as '1'

[illegible]
