

**Problem:** Launching system>status from the menu bar did not launch the usual, expected screen for me. Instead, what I got was a very restricted subset of the information under the header “Repository Data” –

**Solution:** A bit of digging led me to the solution. SAP Note [2658772](#).

SAP\_BASIS version 7.53 has now introduced a new authorization check on system>status. The contents of this popup is now restricted through the authorization object S\_SYS\_INFO. There was no restriction on this in the earlier versions.

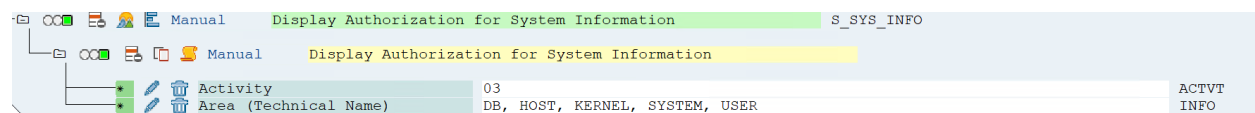

In order to get back the unrestricted view, you will need to create a new role containing the above object, or add it to an existing role, with the below field values –

ACTVT:

03 (Display)

INFO:

- USER (to view the “user data” section)
- SYSTEM (to view the “SAP system data” section)
- HOST (to view the “host data” section)
- DB (to view the “database data” section)
- KERNEL (to access the kernel information)
- \* (to view everything)
