

## Notification Display on Liquid UI Android

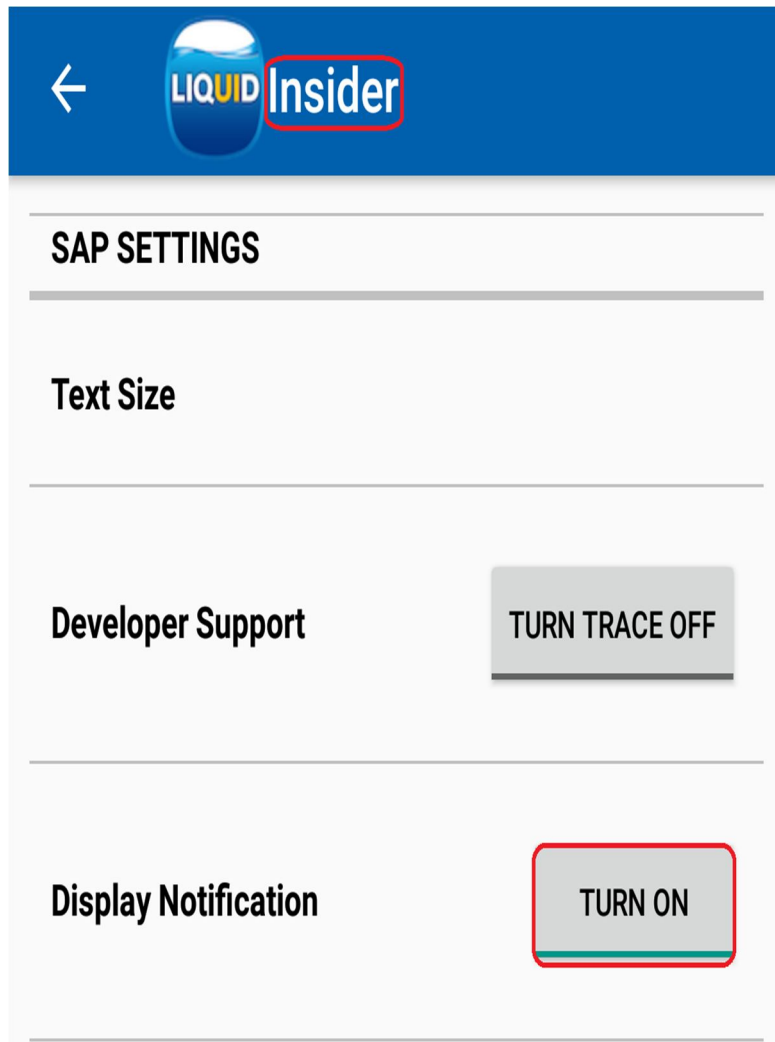

Purpose: To quickly navigate back to the current session saving time and clicks.

Steps:

1. Navigate to “App Settings” from the connection list screen.

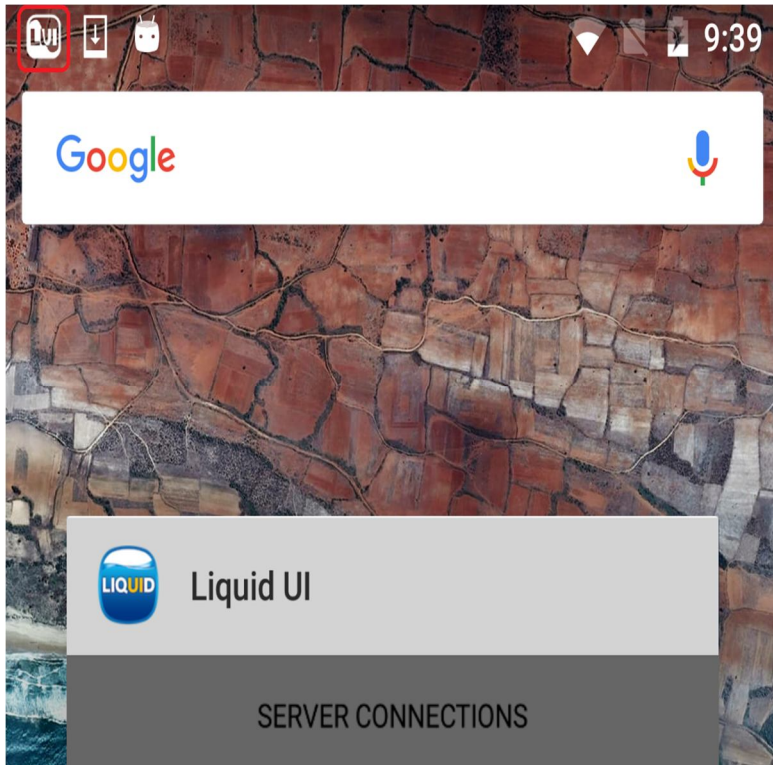

2. “Turn on” the “Display Notification” from “Insider”.

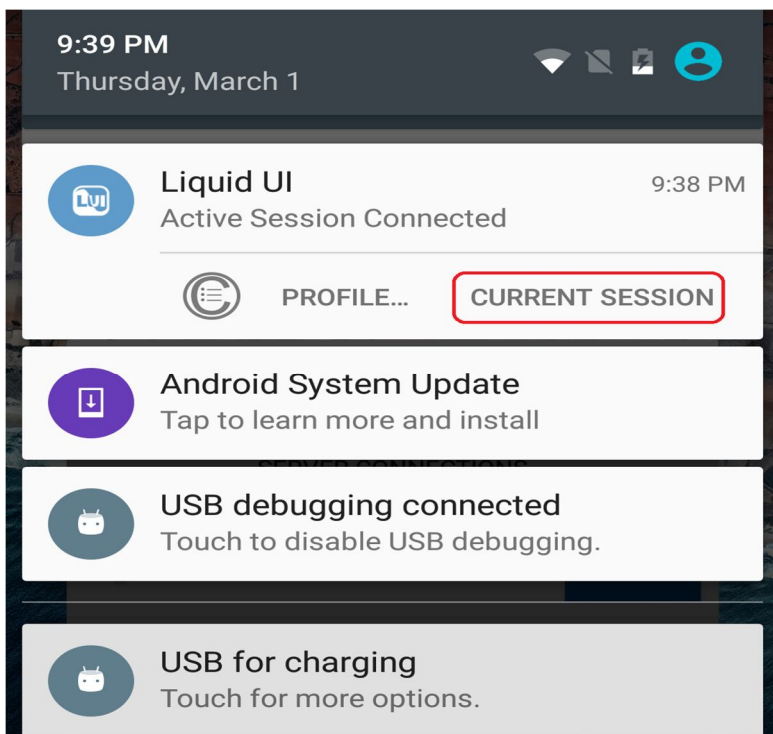

3. Navigate back, Login to your server and minimize the application as shown.

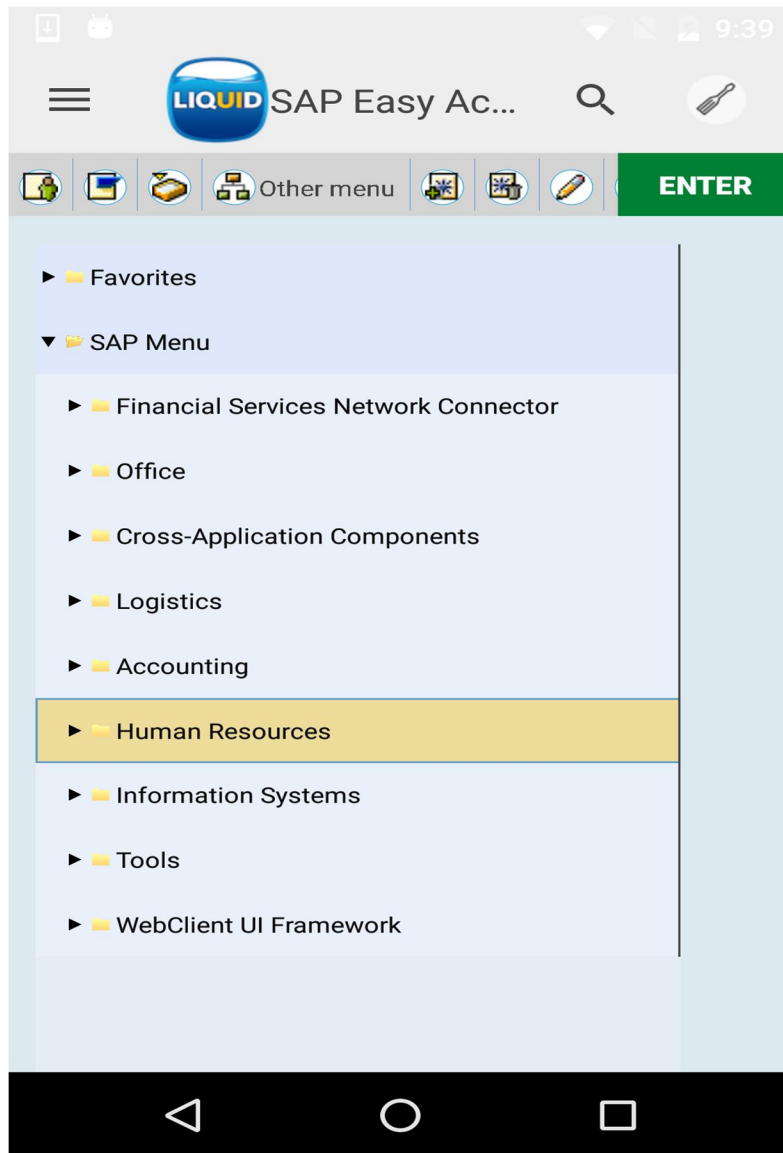

4. Select the “Liquid UI Notification” to the top left corner on the screen as shown.

5. Select “CURRENT SESSION”.

6. You will be navigated back to the same screen that you were working previously

Conclusion: Display Notification feature allows the user to attend to other tasks on the device and navigate back quickly to same screen where he previously left from.
