# Scanguns Appendices

6.1.2.1 Scanguns Basic Profile Settings

The Basic Profile Settings are the first set of configurations to be entered into the Profile and appear as shown below.

These are found on the 'Basic' tab in the Profile settings. There are three areas of basic settings, which are as follows:

- Profile/Logon
- Auto Logon
- Manual Logon

Profile / Logon

The settings in the 'Profile/Logon' section are as follows.

Profile Name

Enter a description for the profile (eg. 'Synactive'). This can be anything.

Optional Log Screen

Scanguns Appendices

Select the Optional Log Screen setting to display a log screen after initiating the connection.

Start Transaction Code

Specifies the transaction that will display after Mobile successfully connects and the user logs into SAP.

Auto Logon

The settings in the 'Auto Logon' section are as follows.

Auto Logon

Check this checkbox to enable automatic logon.

User Name

Contains the SAP username for whomever will be utilizing this connection.

Password

Contains the SAP password for whomever will be utilizing this connection.

Client Number

Contains the SAP application server's client number.

Password

Contains the default language code (e.g. 'EN' for English).

Manual Logon

You will use the Manual Logon section if you want to manually log into SAP instead of using the Auto-Logon feature. Aside from manually entering your password, these settings are very similar to the Auto Logon settings described above. The settings are as follows.

Scanguns Appendices

Manual Logon

Check this checkbox to specify that you must enter a password each time you log into SAP.

User Name

Contains the SAP username for whomever will be utilizing this connection.

Client Number

Contains the SAP application server's client number.

Password

Contains the default language code (e.g. 'EN' for English).
